ShockWave is the only tool you will need for tennis court mold removal and prevention. ShockWave is a state-of-the-art disinfectant/sanitizer/cleaner designed to handle any situation a contractor or janitorial professional might encounter. Indoors or outdoors ShockWave has been formulated, tested and is registered by the EPA for use on more surfaces, in more situations, and to kill more organisms than any other product.

ShockWave is proven effective against harmful pathogens found in most athletic environments and can be used on porous and non-porous surfaces. ShockWave disinfectant and cleaner is ideal for use on sports surfaces such as tennis courts, tracks, gym floors and equipment, and locker rooms.

ShockWave Properties

Active Ingredient: Quaternary Ammonium Chlorides

Flash Point : None (Water based)

Odor: Light Fragrance

Color : Blue

ph: 11.5 - 12.0

Viscosity: Consistency of water

Foam: Moderate

Abrasives: None

Solubility: Complete with water

Emulsification: Excellent

Detergency: Excellent

Rinsability: Excellent

Dilution (Concentrate): 2 oz. per gallon

Storage/Stability : 2 Years

**Disinfectant
Sanitizer
Fungicide**

DESCRIPTION: ShockWave is an EPA registered disinfectant, sanitizer and cleaner designed specifically for mold and mildew remediation. ShockWave is strong enough to be used as a hospital grade disinfectant, and has been specifically formulated to be used on both porous and nonporous materials. When demonstrating efficacy ShockWave was tested successfully in the presence of a 98% organic soil load as opposed to the EPA minimum and industry norm of 5%. These testing standards show that ShockWave is effective in "real world" situations unlike many other disinfectants.

ShockWave is a powerful concentrated quaternary ammonium chloride blend that yields up to 64 gallons of usable product from every gallon of concentrate.

ShockWave has been tested to kill 80+ organisms including *Aspergillus niger*, *Penicillium spinulosum*, *E. coli*, *Salmonella*, HIV, Hepatitis-B, Herpes, MRSA, Poliovirus, and many other pathogenic and environmental microbial organisms.

DILUTION: For surface application use 2 oz. ShockWave per one gallon of water, (one gallon of ShockWave per 64 gallons of water). One gallon of diluted product will treat approximately 500 sq.ft. of surface when applied with a rotary pressure washer. When disinfecting the surface must stay wet for 10 minutes. See label for complete instructions and other dilution ratios.

DIRECTIONS: See label for complete instructions. ShockWave can be used on porous and non porous surfaces including horizontal asphalt and concrete surfaces, bathroom and locker room surfaces, gym equipment and floors. It is compatible with acrylic tennis surfacing products. Excellent for use prior to recoating.

Best results for an entire court area are obtained by using a rotary head pressure washer. Adjust pressure to not exceed 1500 psi. When applying ShockWave to a tennis court or other horizontal surface start at the highest elevation edge of the court and work toward the lowest elevation of the surface. Apply an adequate amount of the diluted product to allow the surface to remain wet for 10 minutes. After treatment, flush the surface with clean water to remove dirt and mold/mildew residue.

If using a hand pump spray, apply adequate ShockWave to wet the surface for 10 minutes. While still wet agitate the effected area with a soft hair push broom. Flush the area treated with clean water to remove residue.

ShockWave disinfectant and mold/mildew killer does not contain chlorine bleach and will not "bleach" out stains. Some scrubbing may be required to remove residual stains from surfaces.

Periodic treatment of shaded areas prone to mildew will prevent the mold and mildew from becoming well established.

PRECAUTIONARY STATEMENTS: Not recommended for fogging applications.

KEEP OUT OF REACH OF CHILDREN

Do not mix with bleach. Keep container closed during storage. Avoid contact with eyes, skin and clothing. Avoid breathing mists. Use in well-ventilated area.

FIRST AID

Skin: Remove contaminated clothing. Flush affected areas with large quantities of water. Seek medical attention if irritation persists.

Eyes: Flush with large quantities of water, holding eyelids open. Seek medical attention.

Inhalation: Remove person to fresh air and monitor. Seek medical attention if symptoms persist.

Ingestion: Give large quantities of water. Seek medical attention immediately.

IMPORTANT: These suggestions and data are based on information we believe to be reliable. They are offered in good faith, but without guarantee, as conditions and methods of use of this product are beyond our control.
